ST. LOUIS PARK - WATER POLLUTION

The St. Louis Park Plant has become more involved in water pollution problems. They have very little historical data, and have and are setting up to sample and test their effluent. I would appreciate if you could forward them copies of your analytical methods for oil and phenol content of waste water, along with any comments concerning their use or your experience in using them. I would appreciate a copy of your reply and your methods for my files.

Very truly yours,

C. F. Leshar
